Setting up Downloads

Downloads are an advanced setup option and are not a part of the basic Opencart set up for WebStupet clients. If you have not done so already contact WebStupet at support@webstupet.com to have this functionality enabled. This article assumes that you have a store using the basic WebStupet setup. After reading this article you will be able to upload files and setup products for customers to download. If you do not want to set up your downloads contact WebStupet at support@webstupet.com and we will set them up for you at $4.95 per download.

You will need to complete two steps to apply filters to your catalog: 1. Upload the downloads, 2. Associate the downloads with products.

Step 1 Upload the Downloads

1. Log into your WebStupet Opencart administration account.
2. Expand the Catalog menu and click Downloads.

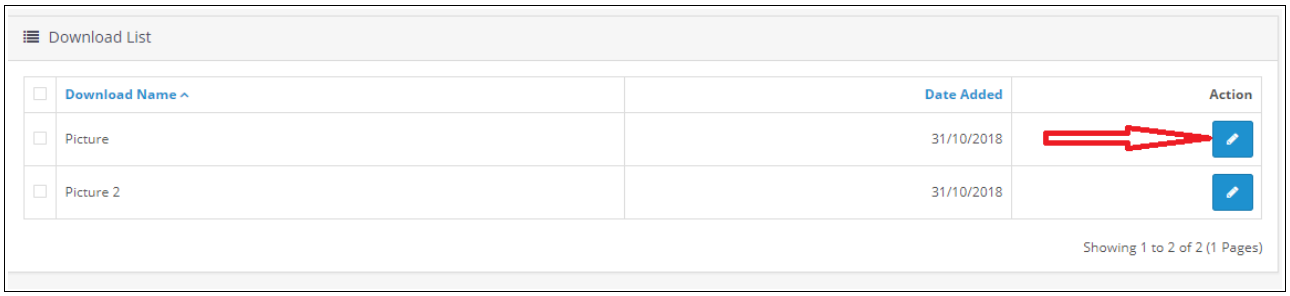
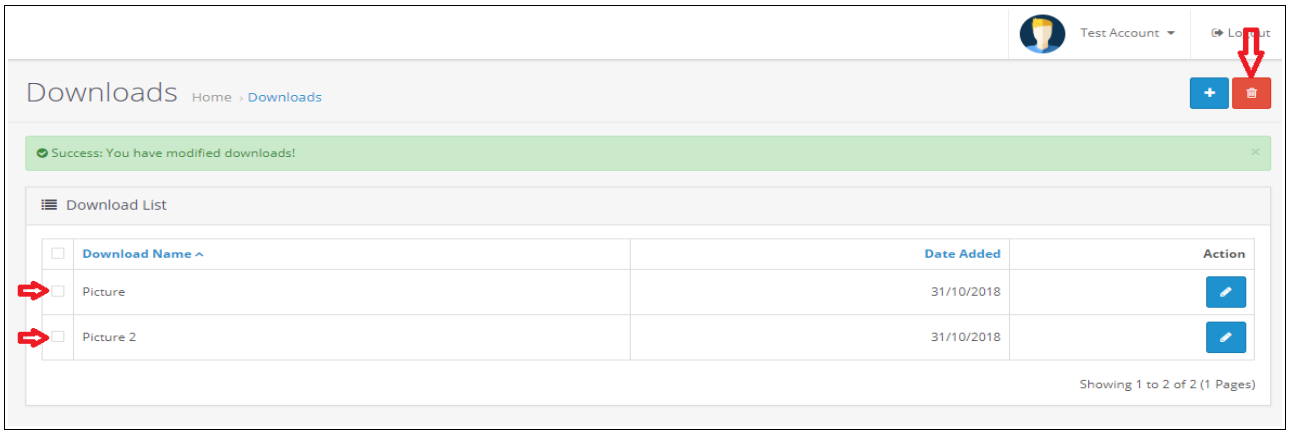
3. To edit an existing download click the edit action button next to the download you want to edit. Refer to the Add New Download section for the definition of the data fields.



4. To delete check the box for the downloads you want to delete and click the trash can.



Add New Download

1. Click the Add Download button.

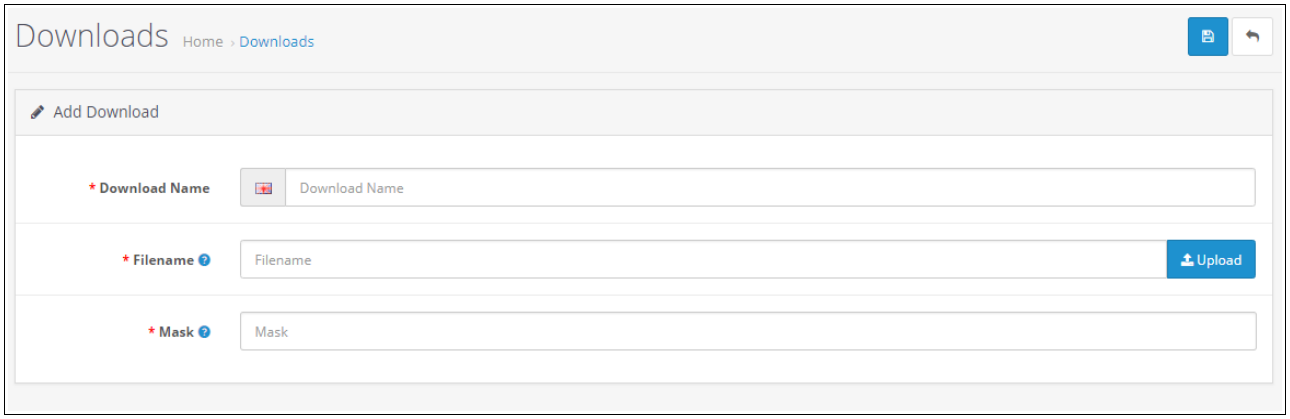
2. The Add Filter screen appears.



1. **Download Name –** Input a name for your download.
2. **File Name –** Click the Upload button and browse for a file. Keep the file name created.
3. **Mask –** Keep the name created with you uploaded the file.
4. Don't forget to click the disc to save your work.

Step 2 Setup Download Products

The setup of downloadable products is mostly the same as setting up other products. This article assumes you are already familiar with the basic setup. If not please refer to: https://help.webstupet.com/assets/files/Product%20Maintenance.pdf. Downloadable products require a few different settings on the data and link tabs.

Data Tab

1. **Tax Class –** In some tax jurisdictions downloadable products are not taxable; therefore, you may want to select no tax class instead of "Taxable Goods". If you are unsure contact your tax professional for assistance.
2. **Quantity –** If your product is only downloadable (in other words there is no physical component) then quantity does not matter. We suggest setting to 1, which will prevent the customer from checking out with a quantity greater than 1.
3. **Subtract Stock –** If your product is only downloadable (in other words there is no physical component)you want to set this to "No".
4. **Requires Shipping –** If your product is only downloadable (in other words there is no physical component) you want to set this to "No"

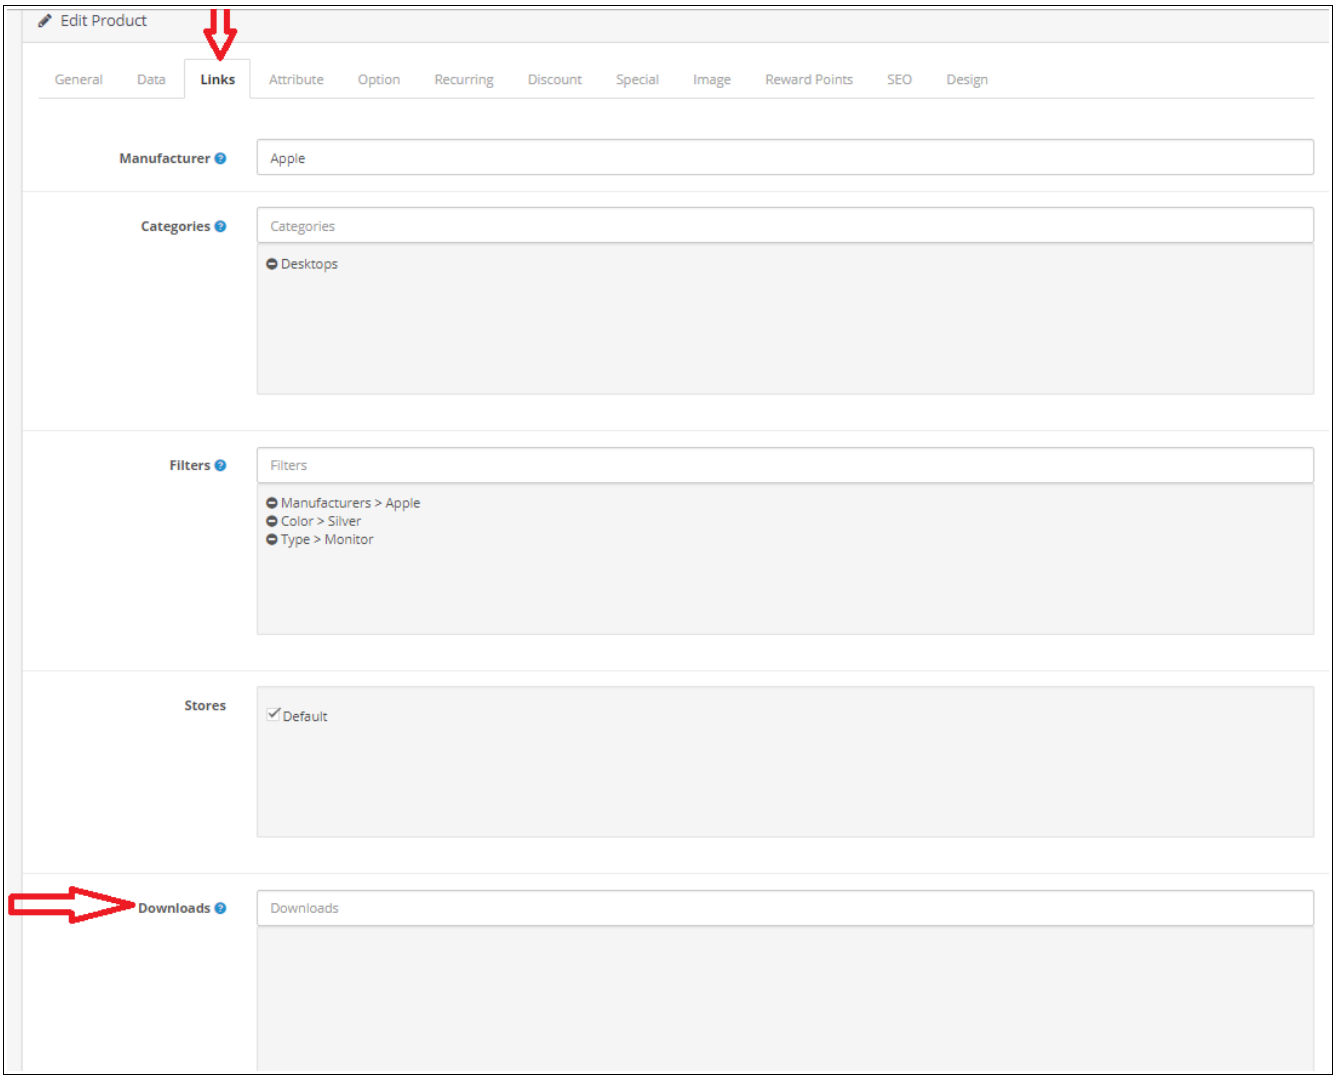
Links Tab

On the links tab you will associated the files that are available for download when a customer purchases this product. To do this you will use the downloads section



1. **Downloads –** Select the download file (or files) that you want to make available to the customer. To select one or more downloads put the cursor in the downloads text box and click the desired download. If your setup has more than five downloads you may need to type the first few letters of the download name to be able to select it.
